

ABDULAZEEM SALAU

Full-Stack Developer | React, Next.js & Payment Integrations | Remote

Lagos, Nigeria | +234 904 406 0010 | shabbaz.dev@gmail.com
shabbaz.dev | github.com/shabbazanwar | linkedin.com/in/abdulazeem-salau-47b86a341

SUMMARY

Full-stack developer building production React and Next.js applications against Node.js and PostgreSQL backends, working remotely with clients since 2026. Specialist experience in payment infrastructure: a live Paystack integration with HMAC-SHA512 webhook signature verification, idempotent order handling, and server-side integrity checks against price tampering and overselling. Comfortable owning features end to end and collaborating async across timezones — all client work to date has been remote and self-directed. Trained through the GOMYCODE full-stack bootcamp; BA English, University of Lagos.

TECHNICAL SKILLS

Frontend: React, Next.js, TypeScript, JavaScript (ES6+), HTML5, CSS3, Tailwind CSS, component architecture, state management, responsive design

Backend & Data: Node.js, PostgreSQL, Prisma ORM, Supabase, RESTful API design, authentication & session handling, relational schema design, migrations

Payments & Security: Paystack integration, webhook signature verification (HMAC-SHA512), idempotent transaction handling, server-side price validation, atomic stock operations

Tools & Practices: Git, GitHub, Agile delivery, async remote collaboration, Vercel deployment, technical SEO, performance optimisation, debugging

Languages: English (native-level fluency), Yoruba, Nigerian Pidgin

EXPERIENCE

Full-Stack Developer | SteezyWorld, Remote | Jul 2026

steezyworld.xyz

- Built and shipped a complete e-commerce platform in Next.js and TypeScript — product catalogue, cart, and checkout — deployed to a serverless environment on Vercel.
- Integrated Paystack payments with HMAC-SHA512 webhook signature verification and idempotent order handling, preventing duplicate charges when payment providers retry webhooks.
- Enforced order integrity through server-side price recomputation and atomic stock decrement, closing client-side price tampering and overselling under concurrent orders.
- Migrated the data layer from SQLite to PostgreSQL after diagnosing that file-based storage cannot persist across serverless invocations; modelled and queried the schema through Prisma.
- Wired transactional order-confirmation email through Resend, and handled DNS and domain configuration through to production launch.

Full-Stack Developer (Freelance) | Septagon Solicitors, Remote | Jul 2026

septagonsolicitors.com

- Sole developer on a six-page production website for a full-service law firm, delivered in four weeks from client mockups with no supervision or handholding.
- Architected the site in React with routed pages, shared components, and centralised content data files, letting non-technical staff update firm details without touching component code.
- Built a reusable CSS design system applied consistently across every page, verified at mobile, tablet, and desktop breakpoints.

Frontend Developer (Freelance) | Yew Couture, Remote | Jan 2026 – Feb 2026

yewcouture.org

- Built the client-facing interface for a fashion brand in React and Tailwind CSS with consistent layouts across all breakpoints.
- Implemented technical SEO — semantic HTML, meta descriptions, social card tags, heading hierarchy, image optimisation — and improved page load performance.

- Worked directly with a non-technical stakeholder, translating informal feedback into scoped fixes and shipping iteratively.

PROJECTS

FinSync — Personal Finance Tracker | Next.js, TypeScript, PostgreSQL, Prisma ORM

finsync-few1.onrender.com

- Designed and queried a relational schema for income and expense tracking through Prisma against PostgreSQL.

ShopSpire — E-Commerce Platform | React, JavaScript, Tailwind CSS, Supabase

shopspire.onrender.com

- Built a full-stack e-commerce application with product browsing and cart flows, using Supabase for authentication, database, and image storage.

EDUCATION

BA (Hons) English | University of Lagos, Akoka | Oct 2023 – Present (Final Year)

- Final-year research project on the impact of social media on undergraduate written communication.

Full-Stack Software Development Bootcamp | GOMYCODE, Alagomeji, Lagos | Aug 2024 – Jan 2025

- JavaScript, Node.js, databases, RESTful APIs, and Git; built full-stack applications in teams using Agile practices.
