PROFESSIONAL SUMMARY

Computer Science senior graduating December 2026 with hands-on experience developing production applications, supporting data integrations and REST APIs, working with SQL databases, and troubleshooting end-user systems. Current industrial account role adds experience interpreting technical requirements, coordinating vendors, and managing data-heavy operations. Seeking entry-level application development, integration, QA, technical analyst, or IT support roles.

EDUCATION

Northern Illinois University | DeKalb, IL

Expected Dec 2026

Bachelor of Science in Computer Science

Relevant Coursework: Data Structures & Algorithm Analysis, Databases, Software Engineering, Operating Systems, UNIX & Network Programming, Computer Architecture & Systems Organization

TECHNICAL SKILLS

Programming & Web: JavaScript, SQL, Python, C++, HTML/CSS, Java, D3.js

APIs, Data & Integration: REST APIs, JSON, MySQL, Microsoft SQL Server, Postman, Boomi

Systems & Tools: GitHub, Linux/UNIX, Windows, Excel, Microsoft 365, Visual Studio, VS Code, Mendix

EXPERIENCE

Fastenal | Rockford, IL

Aug 2025 - Present

Sales Support

- Coordinate approximately \$50K in monthly purchasing and \$100K in onsite inventory to support order fulfillment for a dedicated industrial account and additional Rockford-area customers.
- Process 50–150 purchase orders monthly and support up to \$100K in monthly sales by evaluating pricing, sourcing alternatives, and coordinating product availability with suppliers.
- Interpret CAD drawings and technical specifications, verify products using precision measurement tools, and resolve deviations with customer engineering teams to meet OEM quality requirements.

SupplyCore | Rockford, IL

Feb 2023 - Sep 2023

Information Technology Intern

- Developed a production application that enabled employees to manage employee information, roles, permissions, and administrative workflows.
- Built purchasing and order-management features that allowed users to filter orders, update statuses, and modify order information within the application
- Supported REST API and data integration workflows using JSON, SQL, Boomi, and Postman to exchange data between internal applications and production systems.
- Helped test and deploy an organization-wide Visual Studio upgrade and provided remote troubleshooting for accounts, email, workstations, printers, and peripherals.

PROJECTS

Patterns in Illinois Traffic Stops

Spring 2026

JavaScript | D3.js | HTML/CSS | JSON

- Collaborated on an interactive dashboard comparing eight Illinois agencies across stop volume, search rates, race-based search rates, average stop duration, and time trends.
- Implemented multi-agency selection and linked highlighting across four coordinated views, enabling users to explore agency comparisons through metric toggles, tooltips, and selected-agency summaries.
