Hiring Committee

United Nations Development Programme (UNDP)

I am writing to express my enthusiastic interest in the **Digital, AI and Innovation Internship** at the United Nations Development Programme (UNDP). As an Information Technology Management graduate from the University of Professional Studies, Accra, and a certified Associate Data Engineer, I am eager to apply my data architecture skills and operational tracking experience to support the DAI Hub's global initiatives.

My background uniquely bridges technical data engineering with operational efficiency. As an Issues Manager at Admintelecom Ghana Limited, I built and managed central performance trackers to monitor infrastructure metrics, ensured strict SLA compliance, and generated performance reports to guide strategic decision-making. In parallel, I have designed production-ready data pipelines—such as a Medallion Architecture UFC Data Warehouse and an Enterprise Sales Data Pipeline—utilizing Python, Advanced SQL, and ETL workflows to transform raw datasets into reliable analytical systems.

I am particularly drawn to the **Data Analytics & Insights** and **Process Efficiency & Resource Management** workstreams. My training—reinforced by DataCamp, ALX, and Google certifications—has equipped me to clean complex data, automate workflows, and create visual management tools that make technical insights clear and actionable for non-technical stakeholders.

I welcome the opportunity to contribute to UNDP's mission of leveraging data, digital tools, and AI for sustainable development. Thank you for your time and consideration.

Sincerely,

Philip Mawuli Wemegah
